Firmware Updating Procedure for SeaLife Mini II (SL330) and ReefMaster (SL332) UW Cameras

This firmware update improves the underwater color correction and accuracy of the battery power indicator. Please follow these steps to install the firmware.

Firmware installation instructions

1. Click this link and save the "DS9060M.bin" file to your computer desktop.
   https://www.dropbox.com/s/5bi6onzhaltx5by/DS9060M.bin?dl=0

2. Copy and paste the DS9060.bin firmware file from your desktop to your memory card

3. Insert the memory card into the camera.

4. Push and HOLD the shutter button and power on the camera.

5. The green status light will flicker and the camera will power on.

   Your camera is now updated and ready to use – ENJOY.

Note: To confirm the firmware has been installed correctly, power on the camera, push and hold the mode button for a few seconds until the Advanced Menu opens. Push the Zoom button to scroll up and select "Sys. Info". Push the Mode button and the camera will display the System Information Version V1.03T1. If not, repeat the above process
