SportDiver Smartphone Underwater Housing for iPhone & Android, including iPhone 15 models

MOORESTOWN, NJ – SeaLife’s SportDiver Smartphone housing fits the new iPhone 15 series including the iPhone Pro Max. The SeaLife SportDiver is a compact, lightweight underwater housing that fits most Android and Apple smartphones, and accommodates the new iPhone 15, iPhone 15 Pro, and iPhone 15 Pro Max. The iOS app works with previous generations including the iPhone 8 and up. The SportDiver also accommodates most Android models. Please check SeaLife’s [online directory](#) to determine a particular phone’s fit and compatibility.

The SeaLife SportDiver housing allows divers to take photos and video with their smartphone down to 130 feet or 40 meters. The durable housing is constructed of polycarbonate, stainless steel, aluminum, and optical grade glass. Although the SportDiver housing is “heavy duty”, it is not heavy. In fact, it weighs less than 1.5 pounds (641 grams) on land and offers near-neutral buoyancy in water depending on the smartphone.

The SportDiver ergonomic design is easy to hold and use, featuring a large shutter lever and rear control buttons for easy operation, even with dive gloves. Snorkelers and Divers will be more creative with their photos or video shot by using the advanced camera settings. Depending on your phone model, adjust Zoom, control Exposure, Auto/Manual Focus, White Balance, Lens selection, RAW+JPEG mode, and many more settings.

The SeaLife SportDiver includes the free SportDiver camera app for iOS and Android users. With the SportDiver app, you can easily toggle between photo and video mode. The SportDiver app utilizes the native phone camera technology, which results in the same high-quality photos and videos that you would expect from your phone. The app also offers a power-save mode that temporarily turns off the phone’s camera and dims its display: a touch to any button will wake it up immediately.

The **App Playback mode** shows full size photos and videos with a vertical thumbnail strip to easily locate your images. Videos start playing automatically when selected. All files are saved to the phone’s

camera roll. The SportDiver housing automatically connects to your phone and the SportDiver app using Bluetooth® Low Energy wireless technology. No cables or buttons, just touch the phone. The housing offers ultra-low power consumption, which is powered by two AAA batteries that last over 50 hours of continuous use.

For enhanced imaging results, a removable underwater color-correction filter is included with the SportDiver which restores natural underwater colors. The filter easily attached or removes underwater and includes a safety tether to prevent loss. The SportDiver housing features triple 1/4-20 tripod mounts which mounts to any light or light tray with standard tripod threads such as SeaLife’s own range of Sea Dragon underwater photo/video lights. SeaLife also offers the SportDiver and the Sea Dragon underwater light combined dubbed the “SportDiver Pro 2500 Set”.

For the phone’s safety and protection, the SportDiver has a sturdy holding spring and rubber grip tabs that securely hold the smartphone in place and add shock-protection. **The SportDiver has “Dual Leak Alarms”, which include an internal moisture and vacuum pressure alarms that alert the diver with on-screen warnings, audio, and LED signal in the unlikely event the waterproof seal is compromised** or when there is a loss of housing pressure/moisture detected. The door of the SportDiver is sealed with a TPE O-ring and a robust cam-lock sealing latch that easily latches and securely locks the waterproof door. To prevent interior fogging from residual moisture, the SportDiver uses the anti-fogging agent “Moisture Muncher” capsule, which prevents fogging and internal condensation.

The latest iPhone app is available at the Apple store now:

<https://apps.apple.com/us/app/sportdiver/id1517840362>

The official app name when searching is “SportDiver” by Pioneer Research.

The SportDiver Housing by SeaLife is available now:

About SeaLife:

SeaLife Underwater Cameras are designed and created by Pioneer Research in Moorestown, NJ and were first introduced in 1993. In 2000, SeaLife developed the world’s first digital underwater camera. In 2007, SeaLife

developed the first non-housing digital underwater camera, and in 2013 SeaLife introduced the Sea Dragon underwater lighting system and its innovative Flex-Connect tray, grip, arm, and mounting accessories. In 2014, SeaLife introduced the Micro HD, the world's first permanently and fully sealed digital underwater camera, followed by the new Micro 2.0 in 2015 and the cutting-edge DC2000 underwater camera in 2017. In 2020 the company expanded into compact underwater cameras with its ReefMaster RM-4K and full-featured Micro 3.0 camera. In 2021, SeaLife introduced its first ever smartphone housing; the SportDiver® fits almost all iPhone and Android smartphones. SeaLife cameras, lighting and accessories are sold and serviced in over 60 countries around the world. For more information visit www.SeaLife-Cameras.com
